

unChonk PDF Reader Test Document

This is the fixed sample document used by the unChonk post-deploy funnel test. The PDF reader should extract this paragraph and offer a play button beside it.

Text to speech turns written words into natural sounding audio. unChonk highlights each word as it is spoken, so readers can follow along on the page in real time.

If this text is readable by the extraction pipeline, the PDF leg of the funnel is working end to end.
